# VIDEOCLOUD

A professional on-line video platform for SMEs and creative individuals. It offers the complete package including a simple yet powerful content management system for live video, VoD, skinnable players, built-in monetization options, a website builder tools and rich performance analysis tools.

### Broadcast from anywhere

Broadcast live events from anywhere in the world, record the broadcast and use cloud-based transcoding to provide the best user experience possible.

### Manage your video library

Ingest, sort, categorize, enrich with metadata, set custom rights on all VoD content and live recordings... and more.

### Customize the viewing experience

Design your own players and easily create custom branded, responsive websites, using the website builder tool with provided templates.

### Monetize content

Insert custom adSense banners into configured websites, add pre/mid/post-rolls to content, connect players to the VAST server and monetize through built-in paywall\*, supporting both subscription and pay-per-view plans.  
\*) availability to be announced

### Learn about audience

Get detailed insight into viewer behaviors, including metrics like ATS, regional split, referring websites, browsers, devices and many others. Also connect to your own Google Analytics account.

### Deliver content globally

To provide an exceptionally smooth user experience on any device and any network, JVC VIDEOCLOUD is running on Akamai - the best CDN in the world, serving more than a third of the global video traffic.
